

SAFE SMART SPACES FOR COLLECTIVE ACTION, TECH DESIGNED TO BENEFIT SOCIETY

IF SOCIETY COULD REWIND 20 YEARS, WOULD WE DO THINGS DIFFERENTLY?

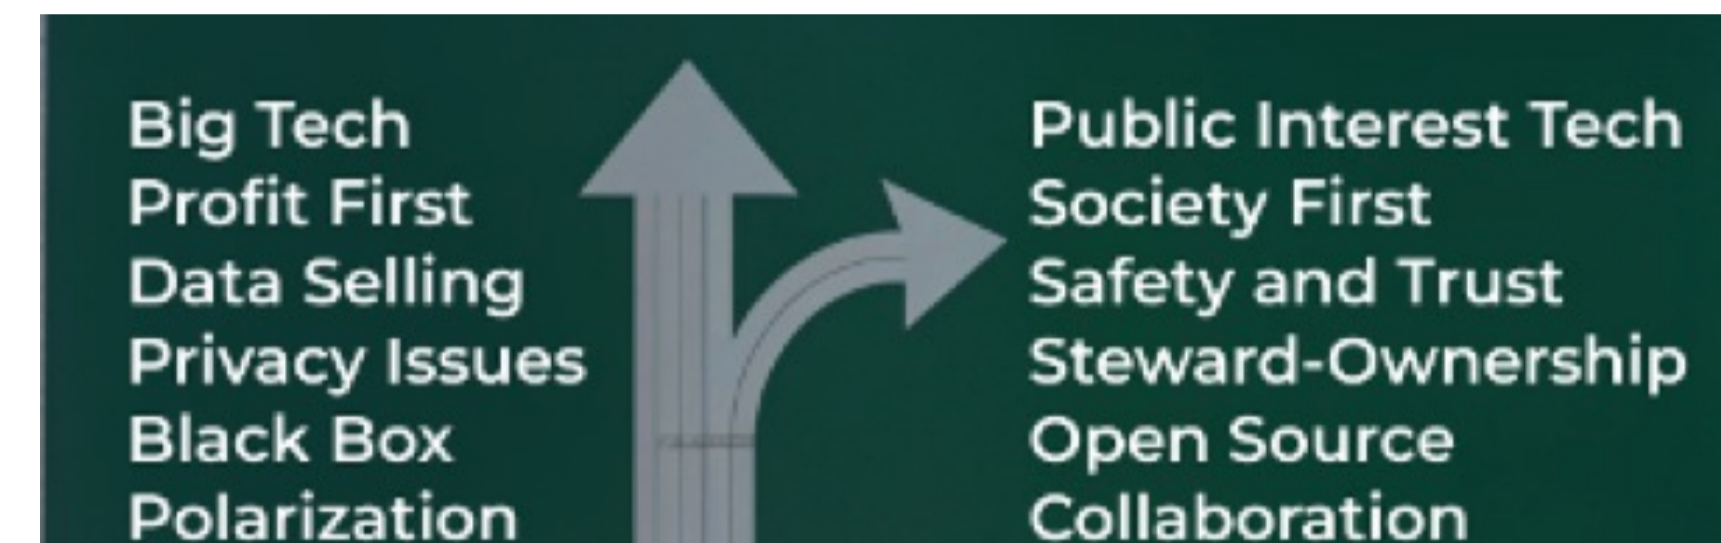

Especially for technology, given its **increasingly** dominant role in our lives. With **profit-maximizing** big tech driving society in a dangerous direction.

The disruptive power of AI is accelerating these trends. It is also increasing awareness of the problems they cause, with a growing **movement** for tech that puts people and society first, **#PublicInterestTech**.

But how can society have such tech? When the public sector struggles to build scalable solutions, and the pure private sector can't be relied on to keep public interests first.

The timing is right for a new approach, combining the strengths of the public and private sectors. Creating a huge market opportunity.

Alkemio is showing this is possible. **Steward** ~~Shareholder~~ **owned**, a company legally aligned with EU societal goals.

COLLABORATION TECH FOR THE PUBLIC SECTOR AND EDUCATION

Alkemio provides the **open source** platform. Purpose built for collaboration towards a goal, with innovation tools and safe ways to work with AI.

So that society has a place to **share** innovation expertise, helping and inspiring each other. Where communities **work and learn together** in a trusted digital environment. Where silos are overcome, and the positive potential of AI is realized. With the growing network effect benefiting everyone.

Alkemio is seeding this collective effort by society. With early partners keen to scale an alternative to big tech, where our potential to collaborate can be realized. With our guarantee to keep public interests first creating an **unfair competitive advantage** vs big tech in our target markets.

Use case examples: **Open innovation course** by Vrije Universiteit; Province of South Holland working with startups and citizens to **improve public services**.

EMPOWERING CHANGE MAKERS

End-to-end digital workspaces. Where gathering and engaging is just the beginning. The real fun is **making something happen**, together!

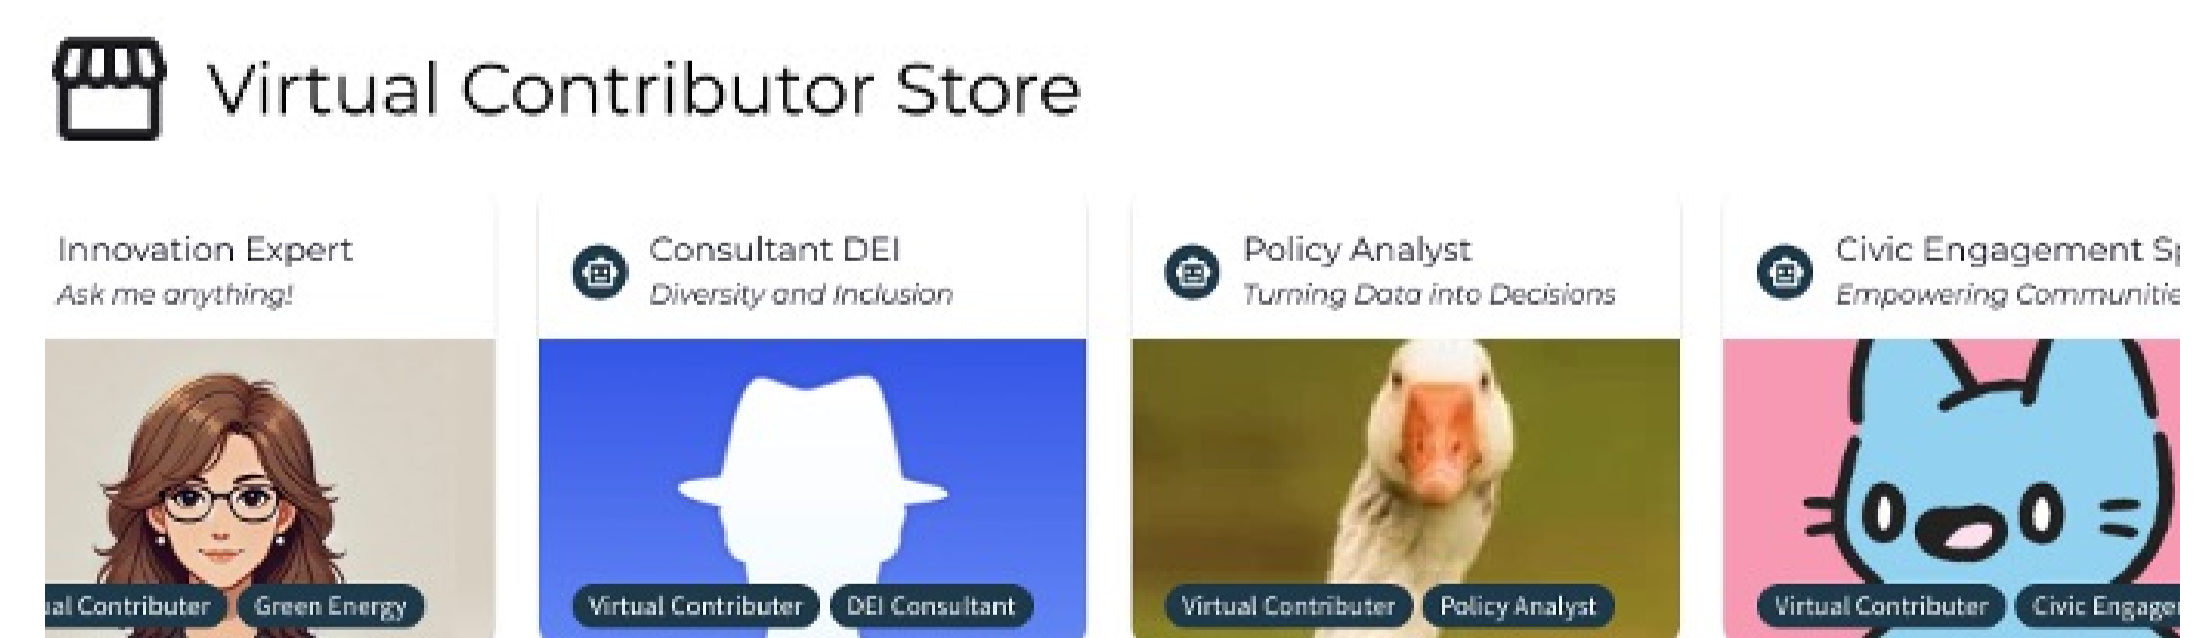

Engage with stakeholders, and collaborate towards a shared goal. On a **dedicated platform**, instead of ad-hoc usage of partial and scattered solutions.

Instantly make **education** challenge based and interactive. Including whiteboards and innovation templates.

Without worrying about big-tech data usage, algorithms, or lock-in.

Safely **integrate AI** into your collaboration, with Virtual Contributors. Created by adding **transparency** and **controls** to existing AI services.

So you can **safely and easily access** AI services and learn how best to work with AI. To boost expertise and productivity, and stay relevant in an AI enhanced world.
